Lincoln Consolidated Mining Company

Plan of Acquiring Properties and Sale of Stock

The Lincoln Consolidated Mining Company has been organized with a capital of Two Hundred Thousand (\$200,000) Dollars, divided into four hundred thousand (400,000) shares of the par value of fifty cents (50c) each.

The Company has acquired by outright purchase, and is now owner of the Lincoln Mine, the West Lincoln, the Iowa Mine, the Stewart Mine and all mineral rights in the following adjacent tracts of land: Diviny, Isola, Garland, Welch, Werner, Butcher Field, Littlefield, Deacon, Simpson, Turner, Sutherland and Hammock, all on the mother lode at Sutter Creek, Amador County, California, and forming one compact group, the combined area of which is equal to about fifteen full quartz mining claims, or 300 acres.

Two hundred thousand (200,000) shares of the stock of this Company have been issued to the owners of these properties in full payment of the purchase prices and deeds to this Company have been executed and recorded in the Recorder's Office of Amador County.

One hundred thousand (100,000) shares of the remaining stock of the Company are

LINCOLN CONSOLIDATED MINING COMPANY

offered for sale at fifty (50c) cents per share; ten (10c) cents per share payable at time of subscription and the balance in four equal quarter-yearly installments.

Preliminary certificates will be issued on first payment to subscribers. These certificates will be transferable on the books of the Company the same as stock certificates.

When the fifty (50c) cents per share has been paid in full, regular stock certificates will be issued to the holders of the preliminary certificates; or, should they desire it, subscribers may be released at any time from further payments on their subscriptions by surrendering their preliminary certificates to the Secretary of the Company. On the other hand, each subscriber to the stock now offered for sale will be given a written option to purchase from the Company, out of its remaining one hundred thousand (100,000) shares, additional stock equal to his original subscription, at the same price and on the same terms, conditioned only on the subscriber or his assignee fully paying his original subscription.

Therefore, should a paying mine be found by the end of the year this privilege will enable original subscribers to double their holdings without paying an increased price; or original subscribers may dispose of their original preliminary certificates and hold their option certificates, which will enable them to renew their subscriptions a year hence at same price and

PLAN OF ACQUIRING AND SALE OF STOCK

on same terms, regardless of the market price of the stock.

The entire One Hundred Thousand (\$100,000) Dollars received from the sale of these two hundred thousand (200,000) shares of stock will be devoted exclusively to the development of the properties of the Company.

When the two hundred thousand (200,000) shares of stock are fully paid all the stock will stand on the same basis.

The Company has paid no commissions on the purchase of its properties and will pay no commissions on the sale of its stock, and no officer of the Company will receive any compensation until the mines yield profits, except the secretary, who will receive a small monthly salary, which will include office rent and expenses.

The foregoing plan is similar to those under which the Argonaut and Bunker Hill mines were acquired and developed.

PROPERTIES AND PLAN OF DEVELOPMENT

Development on the Company's properties consist at the present time in an inclined shaft on the Lincoln Mine, two thousand (2,000) feet deep, together with drifts and cross-cuts restricted to the boundaries of this claim and the ledge formerly worked therein. This shaft is equipped with a good hoist, boilers, compressor, etc., and is believed to be in good condition, except from the surface down to a depth of

about two hundred feet, where it is caved, due to the removal of a body of high grade ore adjoining the shaft. It is estimated, however, that the shaft can be repaired and unwatered in a few months, and that the first cross-cut will within a year reach the east properties of the Company, where ore in paying quantities is anticipated.

The Lincoln Mine was worked extensively in early days and produced considerable high grade ore from the surface to a depth of six hundred (600) feet. It was also worked at a later date and the shaft sunk to its present depth, but after the extraction of several small shoots of good ore, work ceased for lack of funds to prosecute development, and because the old Lincoln Mining Company owned only the Lincoln Mine, and was thus prevented from cross-cutting either east or west to prospect the neighboring territory.

It is therefore chiefly on the strength of the surface indication in this neighboring territory, particularly to the east of the Lincoln Mine, and now owned by the Lincoln Consolidated Mining Company, that it is proposed to re-open the Lincoln Mine, and from the Lincoln shaft to drive cross-cuts through the massive hanging wall greenstone to the slate formation beyond, and so to prospect the veins of this easterly slate belt which were profitably worked at the surface in former days.

Mr. Andrew Noce, a well-known and experienced Mother Lode mine superin-

PLAN OF ACQUIRING AND SALE OF STOCK

tendent, will have charge of the mining operations of the Company.

All subscriptions for stock should be sent to the depository of the Company, the Bank of Amador County, Jackson, California, and inquiries for further information should be addressed to the Secretary.

Subscriptions will be accepted in the order in which they are received.

Check for first payment of ten cents per share must accompany all subscriptions.

All checks received after the stock has been fully subscribed will be returned.
